

Skylight Release Notes July 2020

Next generation insights for marine protection.

Summary

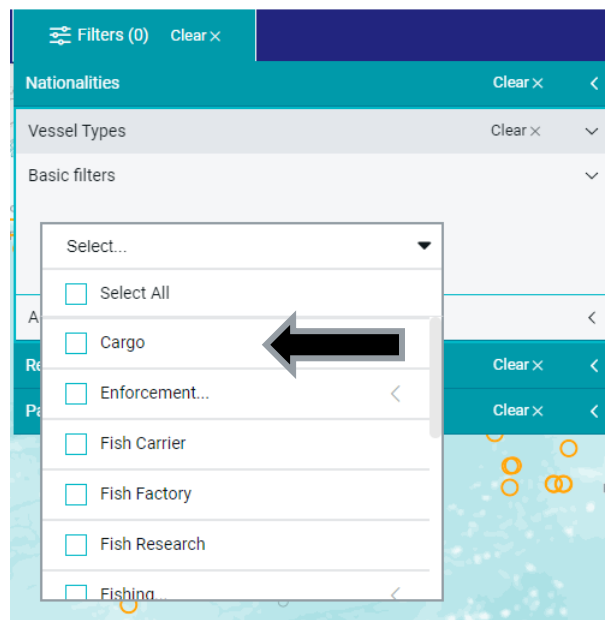

New vessel types are added to the platform.....2

New vessel types are added to the platform

With this release, we have added more vessel types to Skylight. As a result, you should see a greater number of events on the map and the side bar. In addition to viewing rendezvous and entry activity by vessel types that are fishing-related and unknown, you will now be able to view activity by the following vessel types:

- Cargo
- Enforcement
- Passenger
- Pleasure
- Service
- Tanker
- Other
- SAR

When choosing a vessel type filter to narrow down your view, these new vessel types are available in the Basic and Advanced filter options.

Your existing saved searches/email notifications will still be available and running, but you should check if the settings still align with what you are looking for:

- If your existing saved search did not specify any vessel type, it will still be limited to the previous fishing-related vessels only.
 - If you want to expand the vessel types in your saved search/email notifications to include the new vessel types, you must re-create it.
- If your existing saved search did specify vessel type(s), it will continue to be limited to those selected vessel type(s).
